SAFE & SOUND - QUICK START

Levi Studios - Home Inventory - Version 1.0

INSTALL IT (Windows)

Open the folder "Modified Windows Installer" and run SafeAndSound-Setup-1.0.exe. Follow the steps. No password is needed. If Windows shows a blue screen saying it protected your PC, that is expected - Windows does not know small makers yet. Tap "More info," then tap "Run anyway." The install finishes and the icon appears.

OPEN IT

Double-click the Safe & Sound icon on your desktop. The program opens full screen. Press any key to reach the menu. When you are done, press 8 - it saves your work and closes.

RECORD YOUR FIRST ROOM

Press 3 and type the room name, like Kitchen, then Enter.
Press 2 to add an item: type the room number, press A, then fill in the form - name, what it is, its value, serial number. In a form, Enter keeps what is shown; ESC cancels.

THE ONE RULE

If a thing has no value, type NV for its value. It is recorded as NOT VALUED - never as zero, and never counted in any total.

THE REPORT

Press 6 to make the report. It is saved as REPORT.TXT in the Data folder (AppData\Local\Levi Studios\SafeAndSound\Data). Print it and keep it somewhere safe - it is your insurance record. Make a fresh one whenever your house changes.

YOUR INVENTORY IS SAFE

Uninstalling removes the program only. Your inventory stays in the Data folder, and it is there again if you reinstall.

IF ANYTHING LOOKS DIFFERENT FROM THIS CARD,
send Levi a photo of the screen.

Also included: the original DOS version, for DOS computers and emulators. Most people do not need it - the installer above is the one to use on a Windows PC.
